"Make" vs. "Buy" Sourcing Options

- Sourcing Options Overview
- The case for "Pure Make"
- The case for "Pure Buy"
- The case for "Adaptation"

PROJECT]open[

Sourcing Options Overview

"Pure Make"

- "Pure Make" (100% in-house)
- "Make" with external consultants
- "Make" with subcontracted functions
- "Make", followed by spin-off
- "Buy" from provider and customize in-house
- "Buy" from provider, with financial investment in the provider
- "Buy" from provider, but "nurture" provider with partnership and long-term contract
- "Pure Buy" (100% external)
- ...

"Pure Buy"

PROJECT Open

The Case for "Pure Make"

100% of the functionality is developed in-house

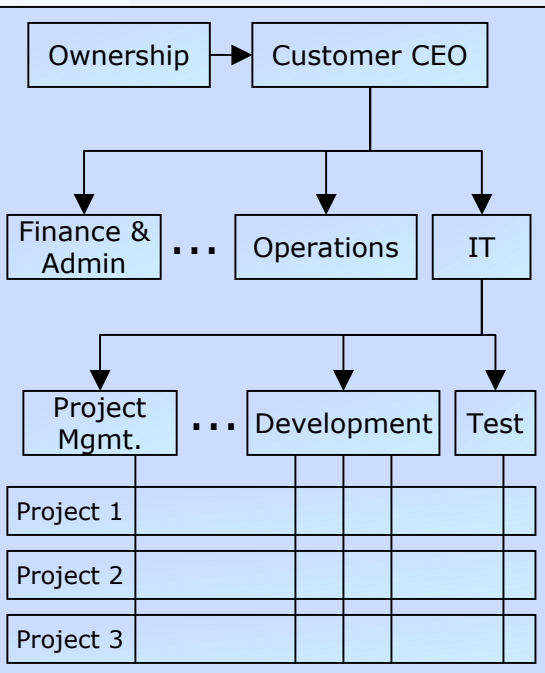

Advantages

- Tailored solutions for in-house needs
- Critical knowledge is kept in-house

Disadvantages

- Lack of knowledge of building and maintaining state-of-the-art IT systems.
- Difficulties of keeping the IT staff busy after the end of the implementation phase
- Difficulty of retaining good IT staff

Customer Organization

PROJECT Open

The Case for "Pure Buy"

100% of "the" functionality is developed by a provider

Customer Organization

Provider Organization

Advantages

- "Economies of Scale": Provider can occupy resources with projects from other customers and share development and maintenance costs among customers.
- Provider may provide additional knowledge, gained from other companies in the sector
- The customer can profit from continuous development of functionality

Disadvantages

- Provider interests may not fit fully with customer interests (roadmap development, functionality, ...)
- The application software is more complex if it needs to fit more than one customer

PROJECT Open

The Case for "Adaptation"

Buy 90% of the functionality and make 10% extensions

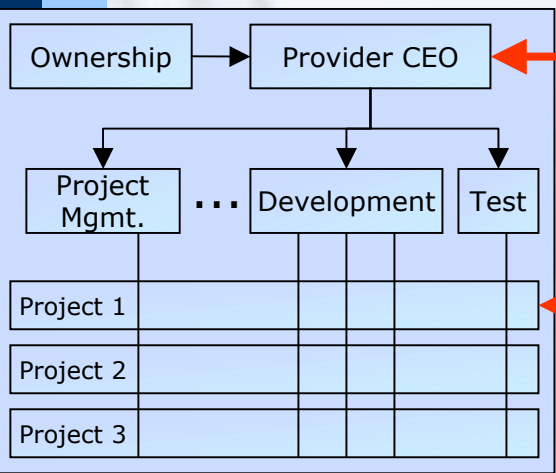

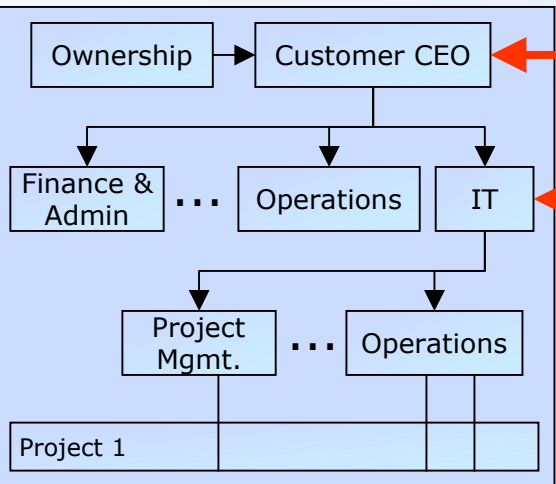

Advantages

- Critical knowledge is kept in-house
- In-house staff is able to react rapidly to company's needs
- Bulk of non-strategic functionality is outsourced with more efficient provider
- Fits with "Strategic or Not" section (see below)

Disadvantages

- Difficulty to manage the partnership
- In-house developers need to learn the provider's software architecture

Customer Organization
Provider Organization

How to Decide

- Summary of Decision Factors
- Example of Decision Factors

Factors:

- Bla bla bla
- Bla bla bla
- Bla bla bla
- Bla bla bla

Decision Factors

Theory

Recom-
mendation

The decisions depends on many factors:

- **"Value" or "Impact":**
How much \$\$\$ is involved in the sourcing decision
- **Relative effectiveness:**
How efficient is your company in building the goods, compared with a provider?
- **Ease of sourcing:**
Is it easy for you to find another provider?
- **Relative sourcing position:**
Is it easier for you to find a provider than for your competition?
- **Strategic or Not:**
Does the sourcing decision influence the possibility to build/lose sustainable competitive advantage?
- **Integrated or Modular:**
How tightly are the sourced goods integrated with the company?

Product or service 1
Product or service 2
Product or service 3
Product or service 4

This example uses a fictitious MLV translation agency with 20 employees, specialized on marketing material. Should they "make" their translation in-house? What should they do with the workflow?

Decision Factors Example

Office Material
Standard Translation
Marketing Translation
Workflow

The decisions depends on many factors:

- **„Value" or „ Impact":**
How much \$\$\$ is involved in the sourcing decision
- **Relative effectiveness:**
How efficient is you company compared with a provider?
- **Ease of sourcing:**
Is it easy for you to find another provider?
- **Relative sourcing position:**
Is it easier for you to find a provider than your competition?
- **Strategic or Not:**
Does the sourcing decision influence your company's ability to build/loose sustainable competitive advantage.
- **Integrated or Modular:**
How tightly are the sourced goods/services integrated into your company?

The company creates "value", by training it's in-house staff in marketing translations. Freelance translators with these skills are very expensive.

Freelance translators with these skills are very difficult to find.

Big translation agencies may have better access to the skilled resources

Big translation agencies may have better access to the skilled resources

A new translator has to learn a lot of knowledge upon joining the company

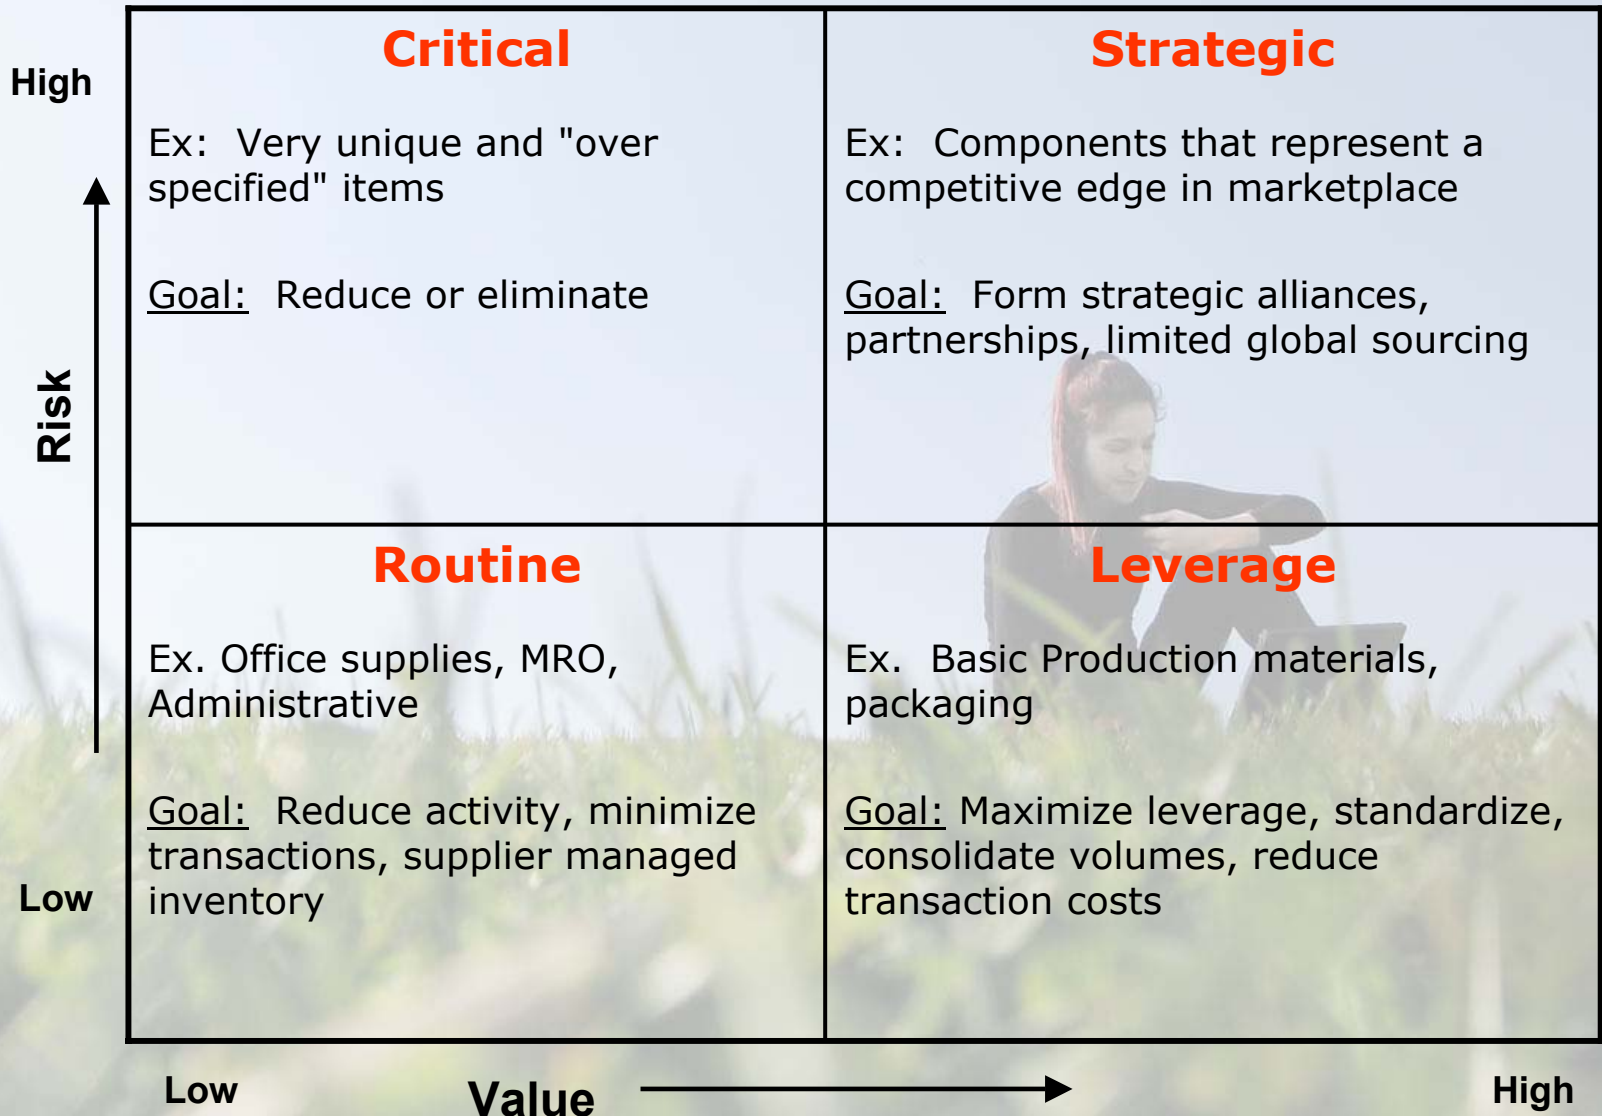

Low	High	High	High
Very Low	OK	Good	Bad
Easy	Easy	Diff	Diff
Same	Good	Med-Bad	Bad
Not	Not	Strategic	Med
Med	Med	Med	Integ

Textbook Theory

- "Classical" – Value vs. Risk
- "Skills" - Skills vs. Strategic Importance
- "IT Depts." - Strategic vs. Efficiency
- "Integration" - Modular vs. Dependent
- "Ford Motor Company" Case Suggestions
- "Resource Dependence Theory"

PROJECT Iopen

"Classical" – Value vs. Risk

PROJECT Iopen

Routine Items

- Routine items are low-value activities which contribute little to the strategic direction of the firm
- Implement streamlining in the acquisition process
- Purchasing goal: Reduce the time spent by personnel in the firm on the acquisition, delivery, stock-keeping, and payment of these items

Leverage Items

- Leverage items are high-value activities
- Focus on short-term contracts and pursue a proactive supply strategy to find new substitute products
- Purchasing Goal: Increase profit margin, use competitive purchasing practices to increase profitability

"Classical" – Value vs. Risk

Critical Items

- Critical items are low-value activities with high exposure/risk
- Strategic items are high-value activities with high risk/exposure
- Purchasing Goal: Evaluate them for elimination

Strategic Items

- Require the highest level of purchasing competence; consider long-term contracts.
- Total cost of acquisition must be monitored and controlled
- Purchasing Goal: Maximize competitive advantage
 - Earlier time to market, Superior Product Quality, Rapid Innovations

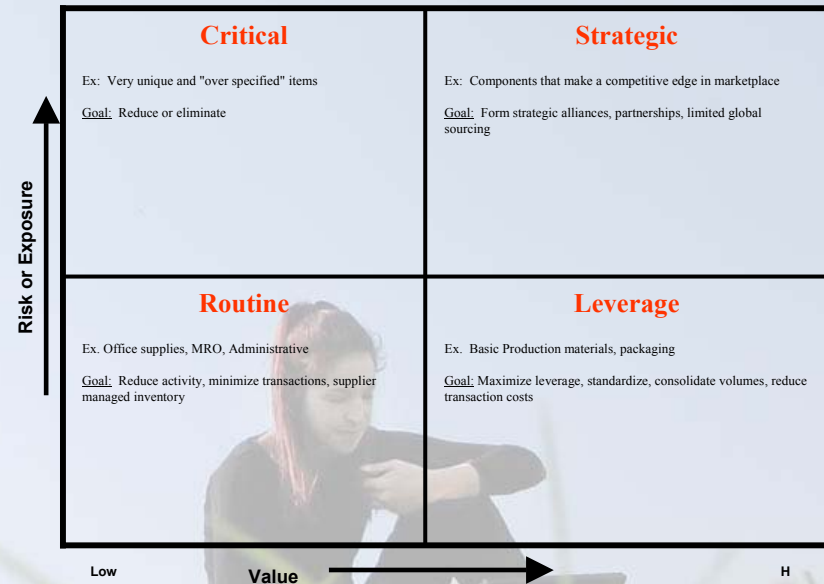

PROJECT Iopen

"Classical" – Value vs. Risk

- Covers the global sourcing situation of a company
- The classic 2x2 sourcing matrix
- Being taught in all MBA sourcing classes

- Very generic
- Most major IT systems are located in the "Strategic" sector.

→ There are few conclusions for IT sourcing concerning "Make" or "Buy", except that we have to keep digging.

"Skills" - Skills vs. Strategic Importance

Company's Skills Related to Best External Source

	Low	Equal	High
High Strategic Importance	Strategic Alliances	Tend to make	Make
Low Strategic Importance	Buy/Outsource	Make or Buy/Outsource	Tend to make

"Skills" - Skills vs. Strategic Importance

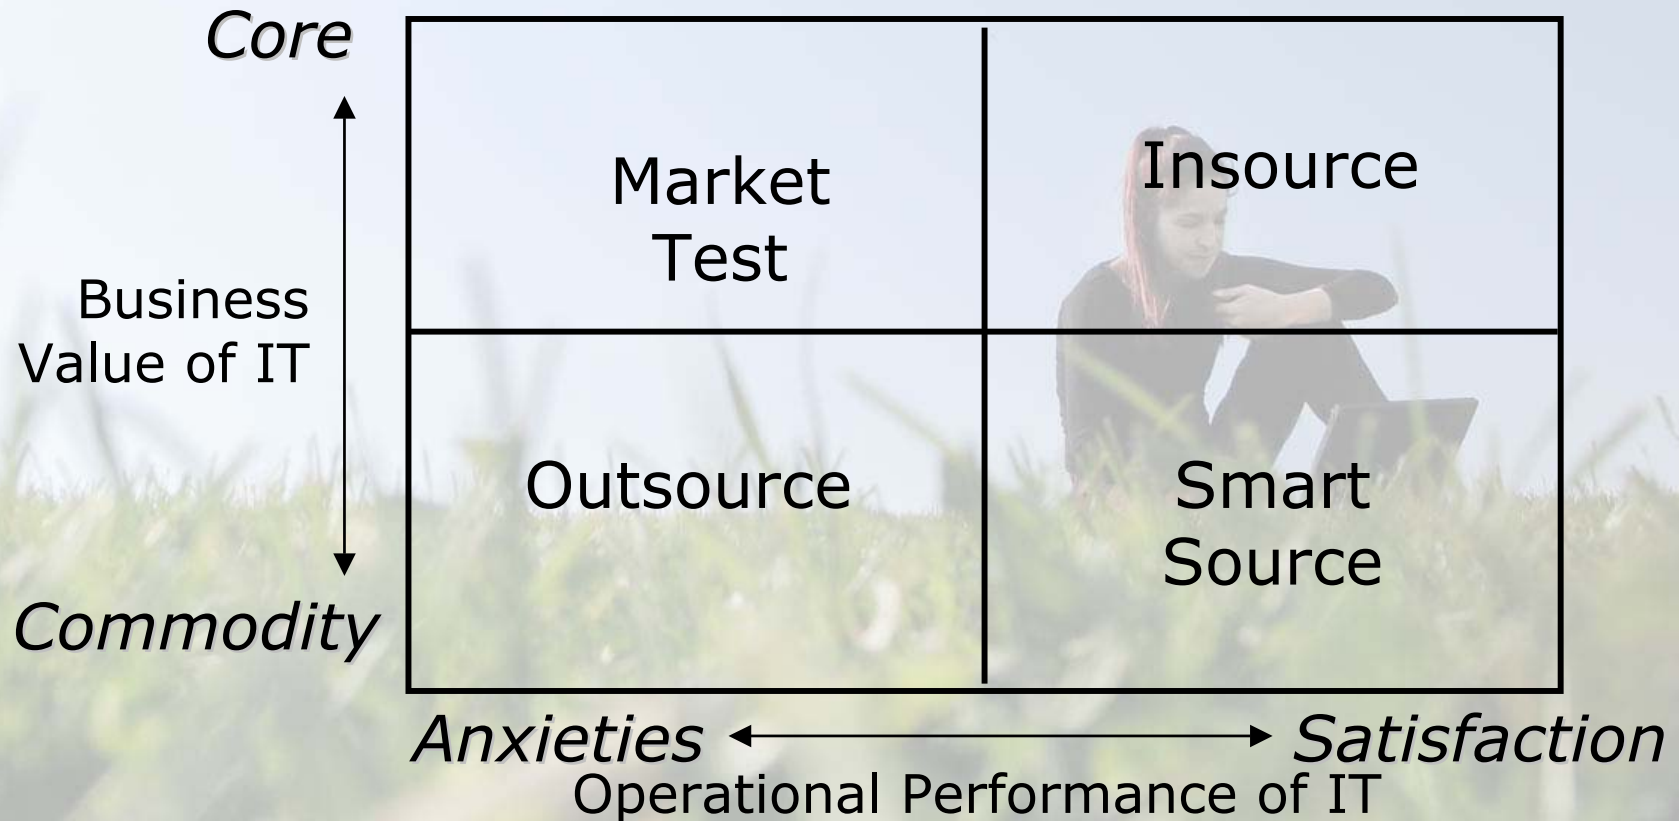

- Generic matrix, not only for IT outsourcing decisions
- The 2x2 is used for large corporations. It's not clear how it relates to SME's

Company's Skills Related to Best External Source

	Low	Equal	High
High Strategic Importance	Strategic Alliances	Tend to make	Make
Low Strategic Importance	Buy/Outsource	Make or Buy/Outsource	Tend to make

"IT Depts." - Strategic vs. Efficiency

PROJECT Iopen

"IT Depts." - Strategic vs. Efficiency

When to Outsource

- reduce head count
- service a "commodity"
- can't afford time, \$ for new tech
- can't keep good staff
- don't have good staff
- small project

When to Insource

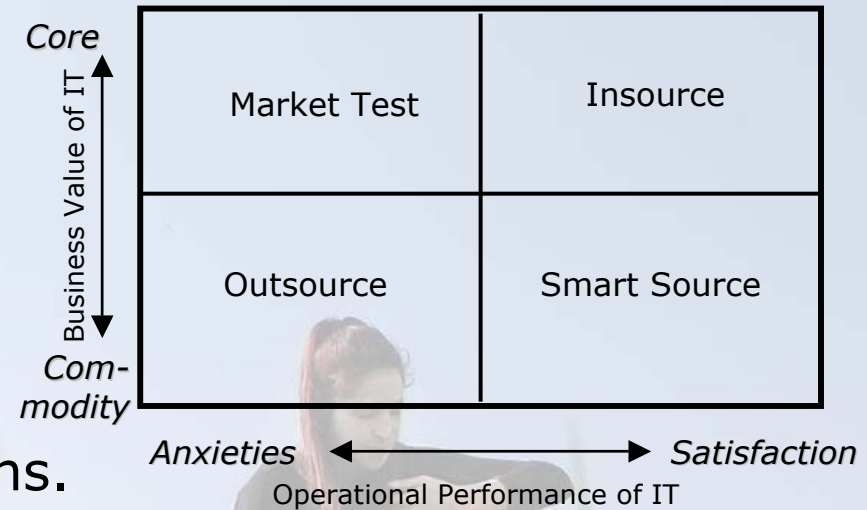

- function is mission critical
- is a core competency
- cannot identify any cost savings
- not clear that vendor is any better
- vendor cannot be "controlled"

PROJECT Iopen

"IT Depts." - Strategic vs. Efficiency

- Focuses on the experience that an in-house IT department doesn't fully satisfy expectations.
- The 2x2 is being used in generic IT outsourcing decisions in large corporations.

- The "Operational Performance of IT" measure depends on the track record of the IT department in a given area. This may be difficult to measure in the case of complex software development

PROJECT Open

"Integration" - Modular vs. Dependent

	Dependent for Knowledge & Capacity	Dependent for Capacity only	Independent for Knowledge & capacity
ITEM IS MODULAR	A POTENTIAL OUTSOURCING TRAP	BEST OUTSOURCING OPPORTUNITY	OVERKILL IN VERTICAL INTEGRATION
ITEM IS INTEGRAL	WORST OUTSOURCING SITUATION	CAN LIVE WITH OUTSOURCING	BEST INSOURCING SITUATION

PROJECT Open

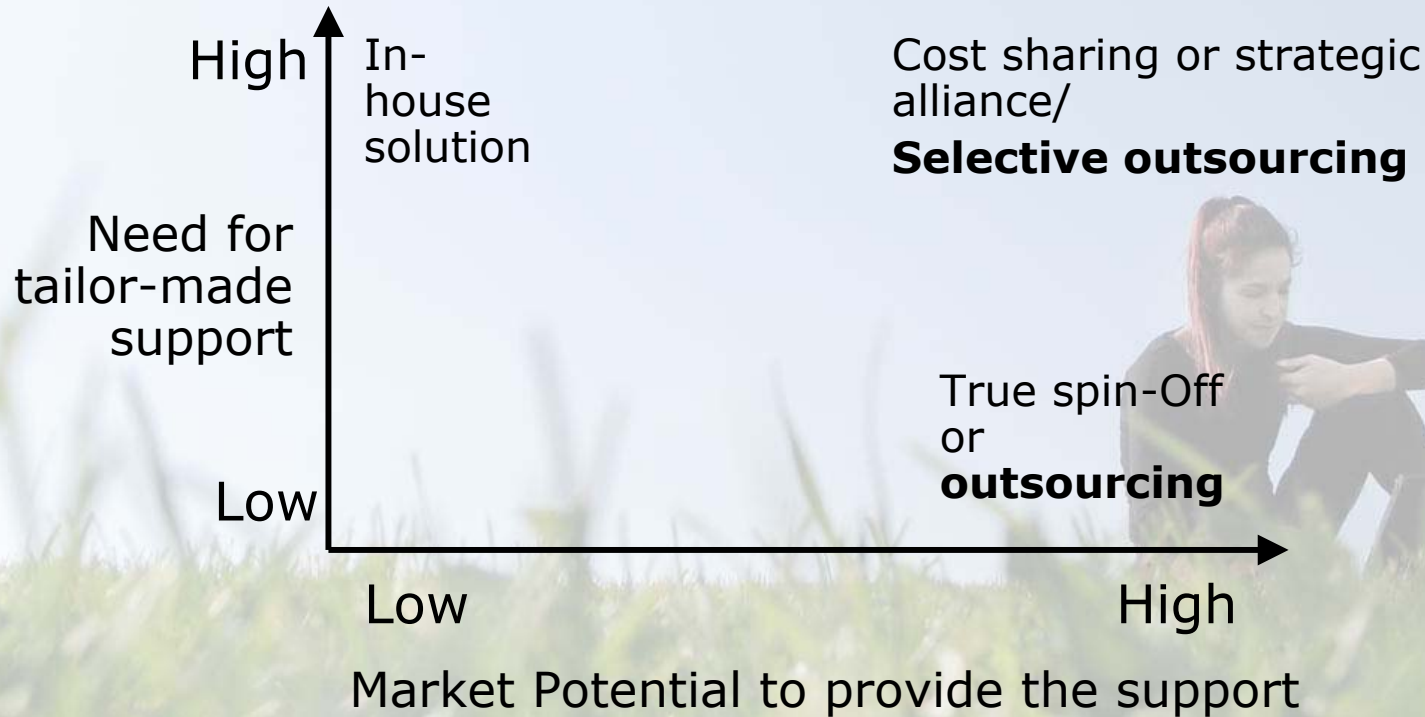

"Integration" - Modular vs. Dependent

- Focuses on "modularity" of the product or service
 - Captures the "dependency" of other systems in the product's company.
- May apply more to the decision of how to source part of a product than to the IT "make or buy" decision. Also, the author further elaborates on the concept of "clockspeed" in the corresponding market which doesn't apply to IT sourcing decisions.

	Dependent for Knowledge & Capacity	Dependent for Capacity only	Independent for Knowledge & capacity
ITEM IS MODULAR	A POTENTIAL OUTSOURCING TRAP	BEST OUTSOURCING OPPORTUNITY	OVERKILL IN VERTICAL INTEGRATION
ITEM IS INTEGRAL	WORST OUTSOURCING SITUATION	CAN LIVE WITH OUTSOURCING	BEST INSOURCING SITUATION

PROJECT Iopen

"Resource Dependence Theory"

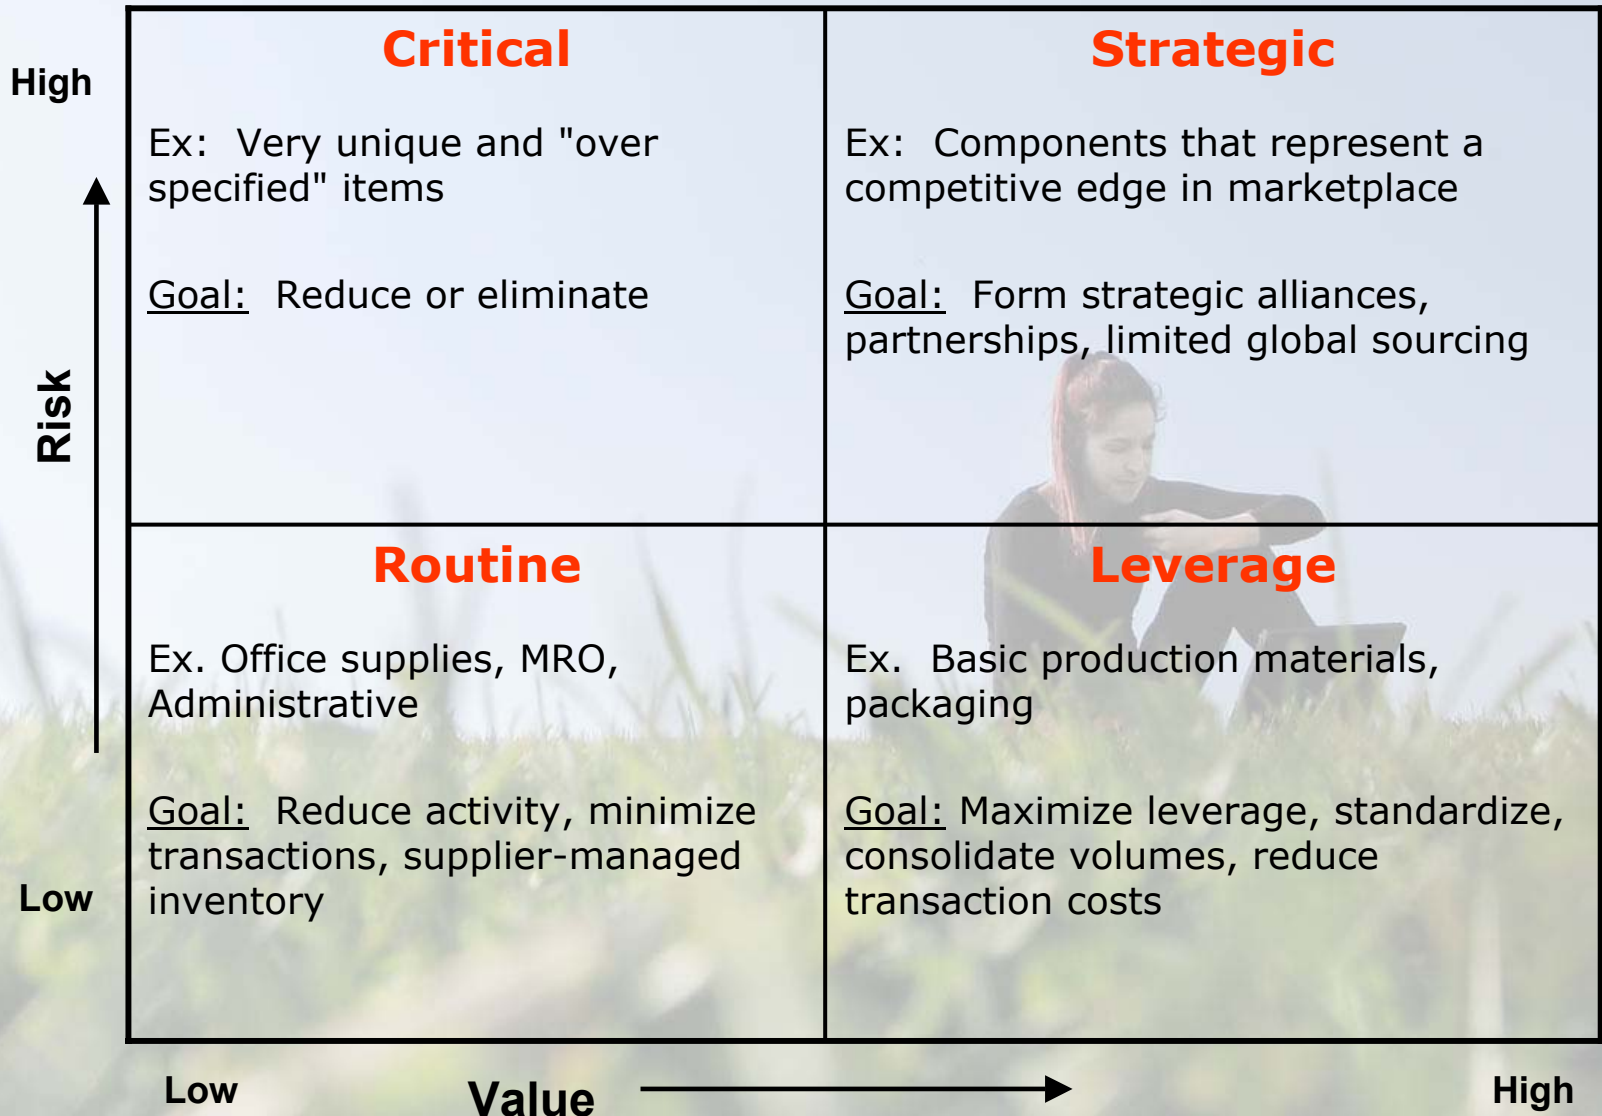

Summary

- "Classical" – Value vs. Risk
- "Skills" - Skills vs. Strategic Importance

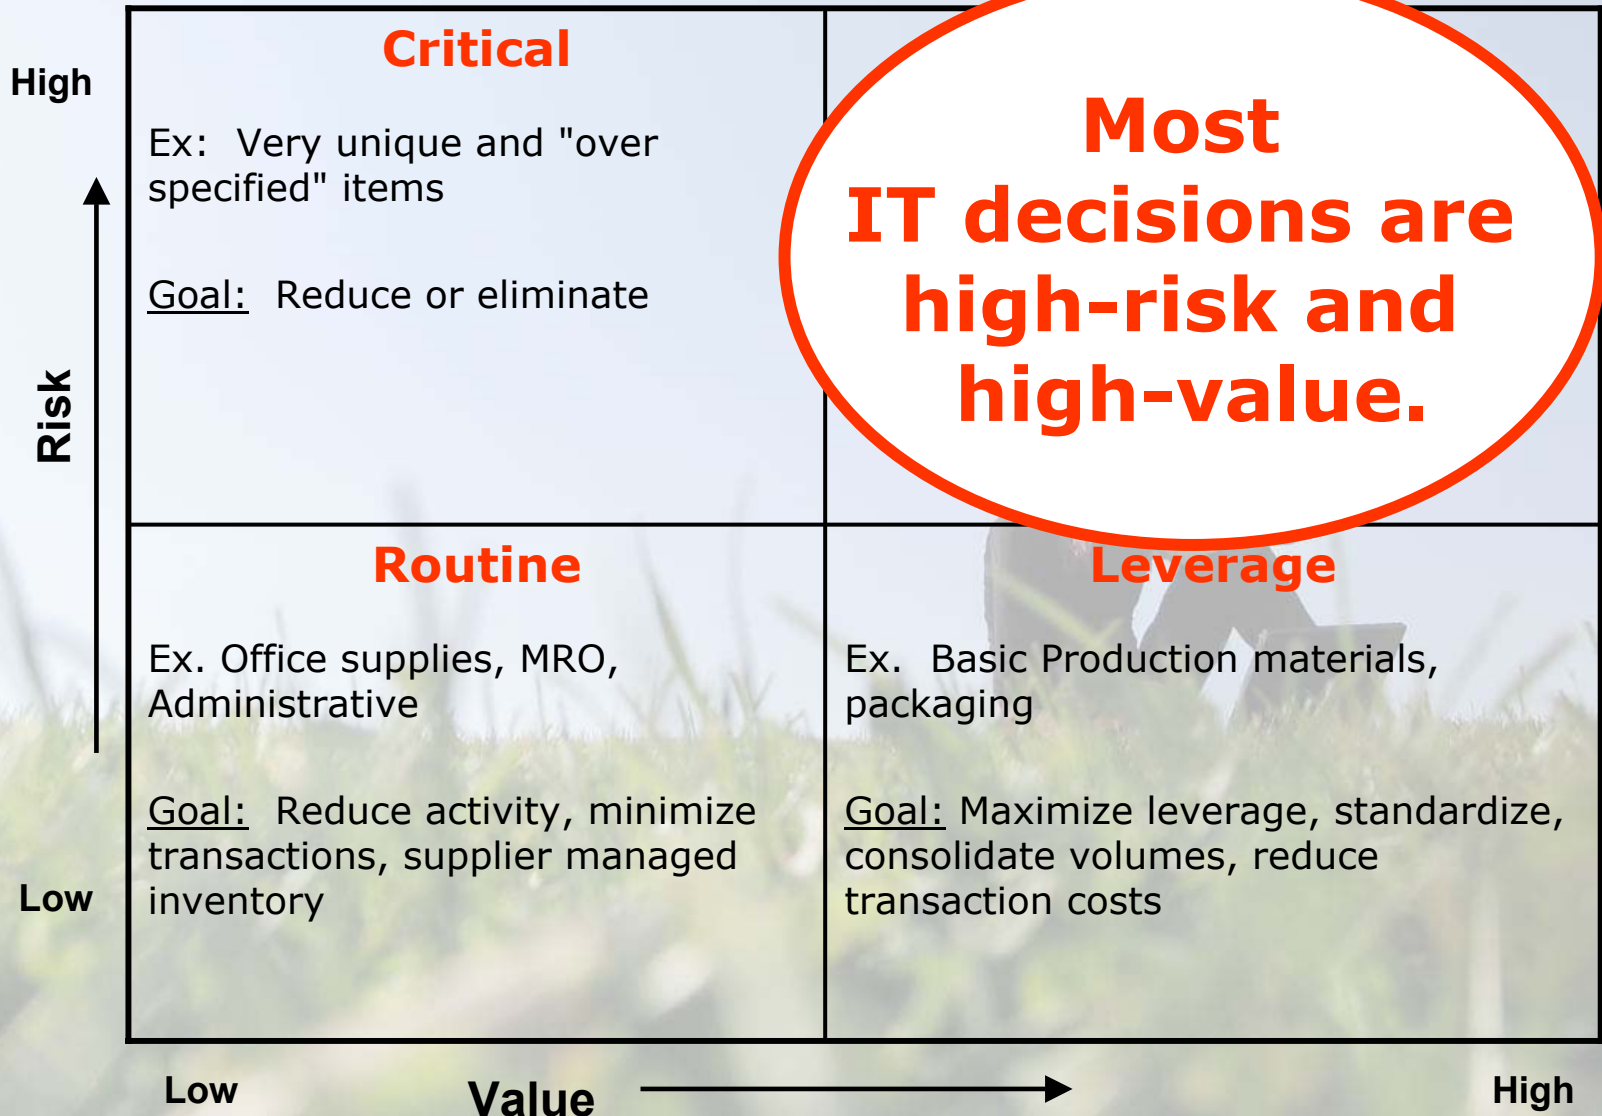

PROJECT Iopen

"Classical" – Value vs. Risk

PROJECT Iopen

"Classical" – Value vs. Risk

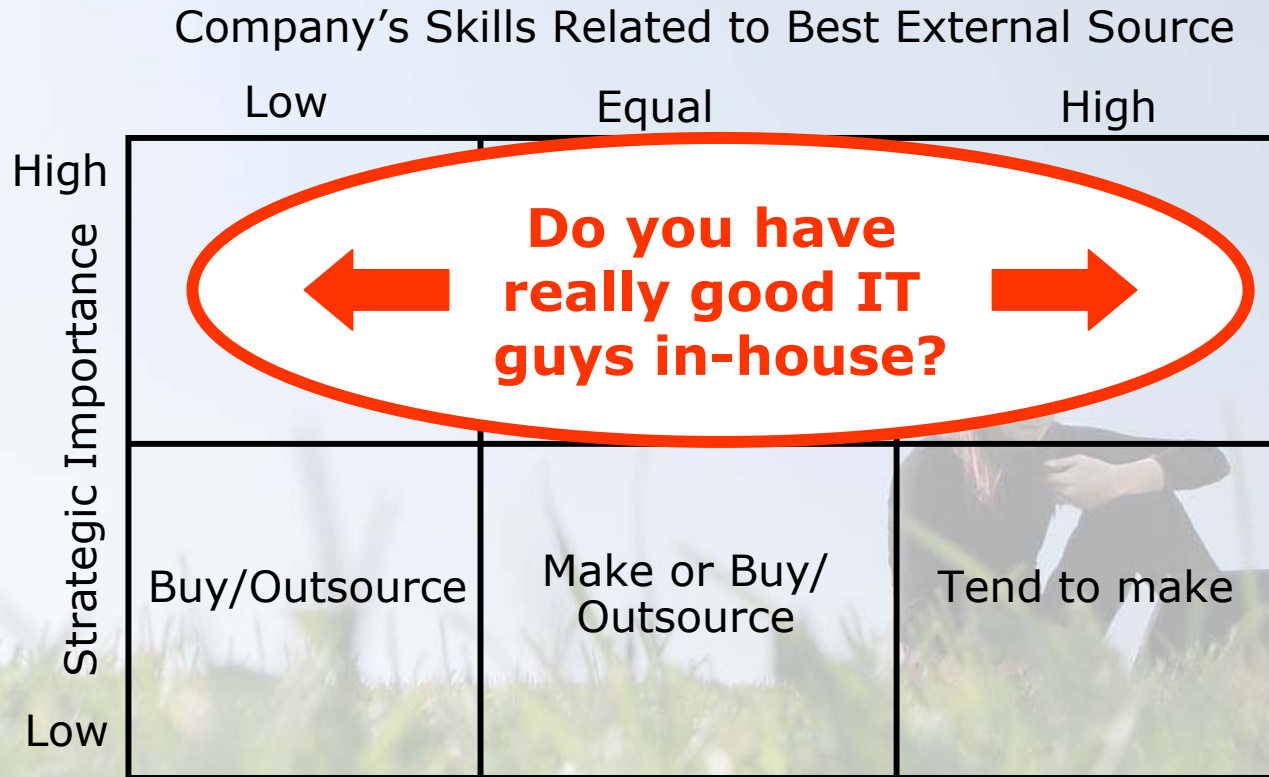

**Most
IT decisions are
high-risk and
high-value.**

"Skills" - Skills vs. Strategic Importance

Company's Skills Related to Best External Source

	Low	Equal	High
High Strategic Importance	Strategic Alliances	Tend to make	Make
Low Strategic Importance	Buy/Outsource	Make or Buy/Outsource	Tend to make

"Skills" - Skills vs. Strategic Importance

→ Strategic or Not?

→ How good is your IT team?
(Compare with the best external source)

Strategic or Not?

- What is "Strategic"
- IT is not "Strategic"
- Translation Workflow Benefits
- Translation Workflow Extensions
- How to Differentiate?
- Sample ERP Architecture
- Strategic Modules

What is "Strategic"

A **strategy** is a long term plan of action designed to achieve a particular goal [...].

Wikipedia

- Goal:
 - ➔ Sustainable competitive advantage
 - ➔ Sustainable superior margins

- Examples that are known to work:
 - Size: Be the biggest
 - Price: Be the cheapest
 - Specialization: Be the best in a very specific field

Michael Porter claims IT doesn't provide companies with a competitive advantage:

- To gain competitive advantage using IS and IT usually needs an element of surprise; the system needs to be out in the market place before competitors make a start in copying the idea
- Sustaining that competitive advantage requires either:
 - Converting the technical advantage into brand advantage
 - Sustaining the technical lead by continuous product and service development

Strategic for you?

- Improved general efficiency by 20%
- Demonstrate sophistication to customers
- Improve quality (process standardization)
- Take more informed project staffing decisions

no

no

no

no

→ Generic Translation Workflow is not "strategic" (according to Porter)...

→ You may need it anyway to match or exceed your competitor's "operational efficiency".

PROJECT Iopen

How do you compete?

Sales/
Channel

- Brand
- Salesforce ("presence")
- Proximity

Specialization/
Niche

- Specialization on field, industry sector, value chain position,...
- Linguistic Resources
- Upward Integration
- High Quality

Price

- Price
- Size / economies of scale

Service

- Capability to execute /Company Size
- Execution Speed
- Customer Service
- One-Stop shop

...(?)

- ...

Strategic for you?

- Support for specialized processes?
- Managing knowledge in order to allow for synergies in very big company
- Special way to manage quality
- Attract better freelancers
- Manage existing knowledge
- ...

maybe

maybe

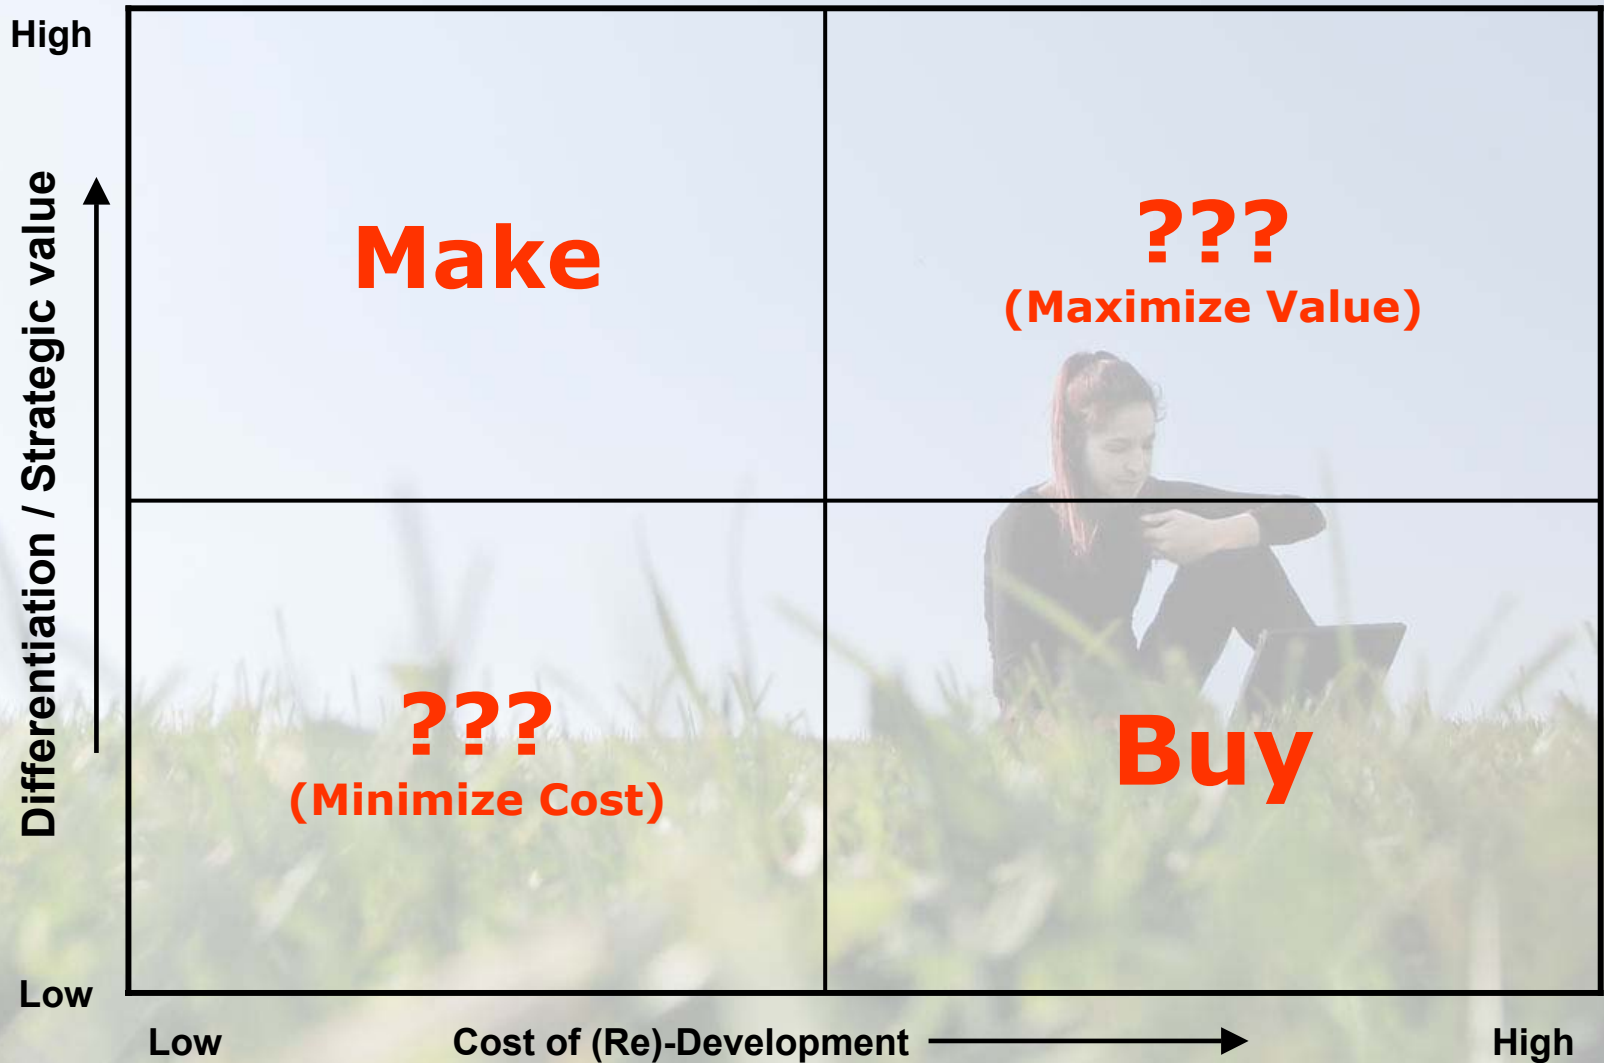

maybe

maybe

maybe

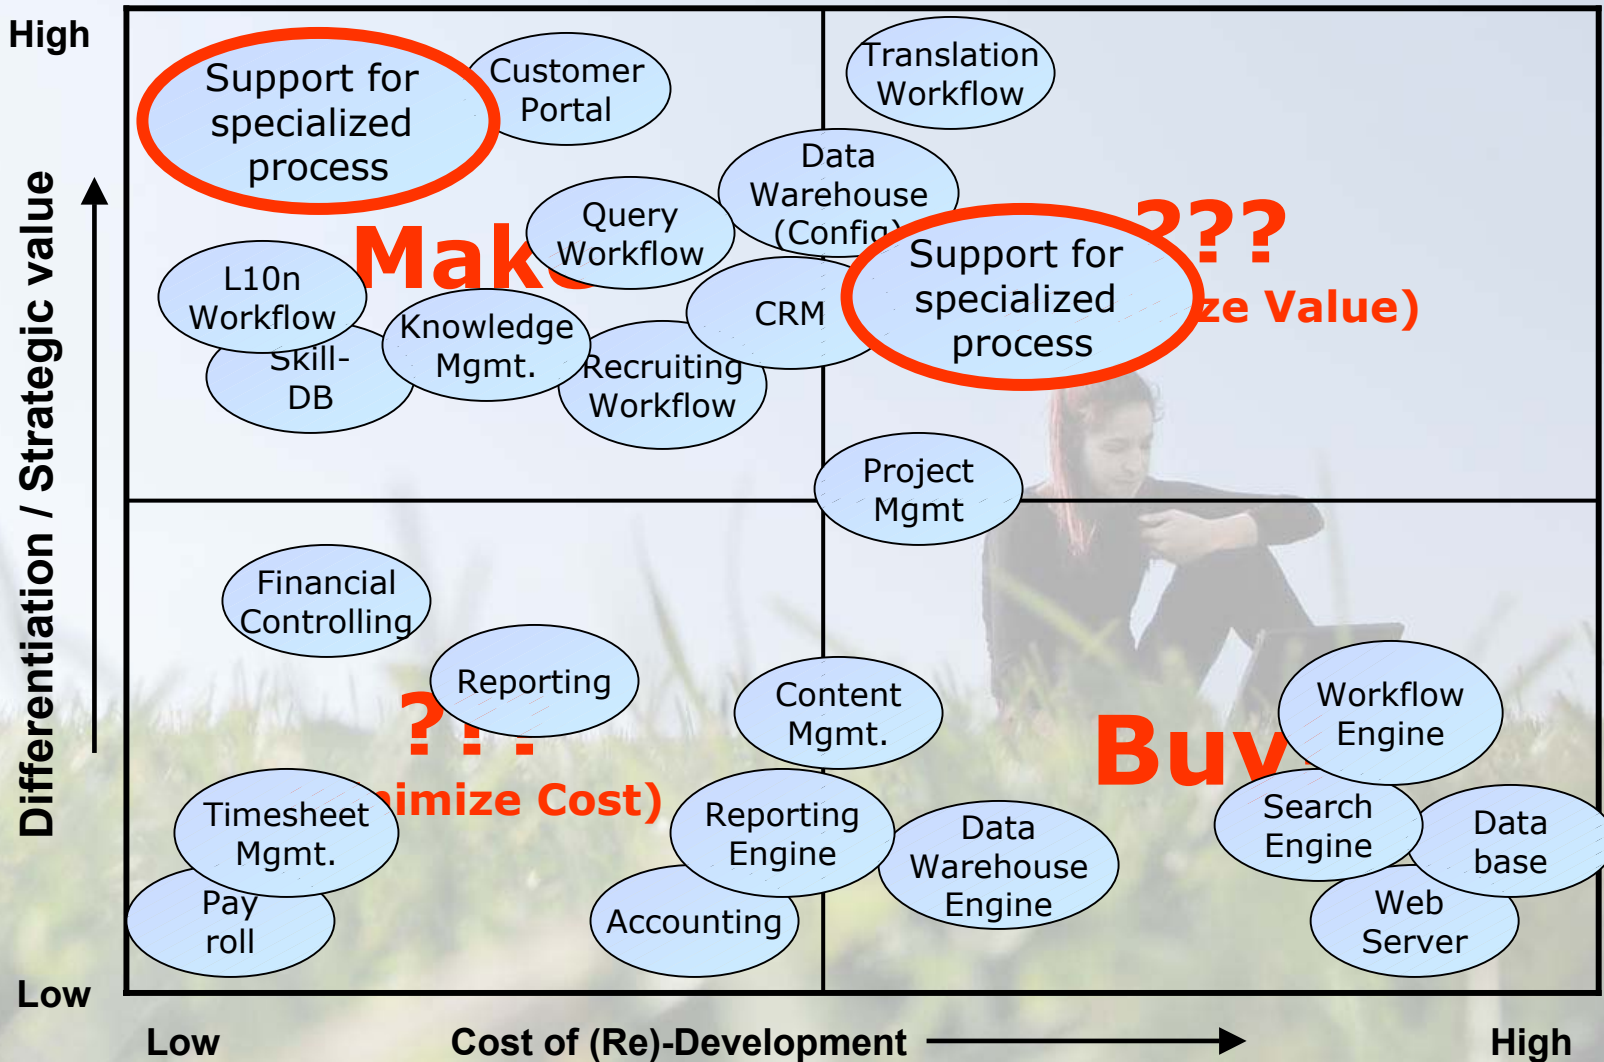

...

→ You may have to extend your IT application using proprietary functionality in order to gain a sustained competitive advantage.
