Figure 7.72: Client view in Project/Open

interface that is very easy to understand and apply. Due to the restricted functionality and the quality of the user interface the need for training is relatively low. Since Project/Open can support sales and administrative processes, a certain time for installation and customization is necessary.

Project/Open addresses the project team and administrative functions. Project/Open is suitable for all kinds of service companies or corresponding organizational units in larger enterprises. Its range of functionality makes it an adequate choice for projects with little to medium complexity. Project/Open only requires basic project management skills.
